Services

Test bench services

From development to implementation:

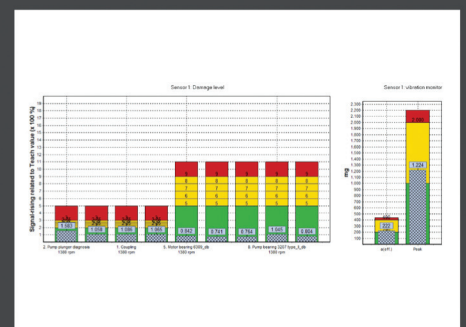

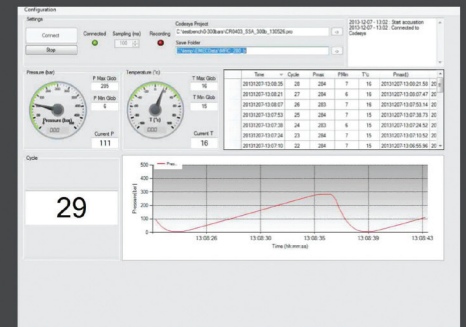

- Test bench development, instrumentation and installation.
- Automation for 24 hours operating test.
- PLC programming.
- Software development for automated data acquisition and post processing.
- Technical assistance.

References

- Ambient and extreme temperature cycle test bench development for pressure cycling test according to ISO 11439 applied to high pressure cylinder for the onboard storage of CNG as a fuel for automotive vehicles.
- Ambient and extreme temperature cycle test bench development for pressure cycling test according to ISO 11119 applied to gas cylinders of composite construction.
- Instrumentation and Software development to achieve automated data recording during mechanical power transmission components testing for a well known gearbox manufacturer.
